

Rock Cycle Song

(Sing to the tune of "Row, Row, Row Your Boat")

SEDIMENTARY

Has been formed in layers
Often found near water and
With fossils from decayers

Sedimentary Rock

Then there's **IGNEOUS**

Here since Earth was born
Molten lava, cooled and hardened
That is how it's formed

Igneous Rock

These two types of rocks
Can also be transformed
With pressure, heat and chemicals
METAMORPHIC rocks are formed.

Metamorphic Rock
